Chatbot pilot: data protection policy

Fictional sample for testing. All names, numbers, addresses and IDs are made up.

Northbridge Relief Network (fictional). Approved by the board on 2 April 2026.

1. Scope

This policy covers all data used to build, train, test and run the helpline chatbot piloted in Kakuma and Kalobeyei, Kenya.

2. Principles

Do no harm: no data is used if its use could expose a person to risk. Humanity: the chatbot exists to reduce suffering, not to collect data. Impartiality: the chatbot must work equally well in Somali, Swahili, Turkana and English. Independence: no data is shared with authorities, donors or technology companies.

3. Data we use

Phase 1: synthetic conversations written by staff and public pages of partner NGOs. Phase 2, only after re-consent and a re-identification test: anonymised helpline transcripts. Never: calls about gender-based violence, child protection or health.

4. Anonymisation

Names, phone numbers, emails, case IDs, medical record numbers and locations below district level are removed before data leaves the country office. A re-identification test on 500 transcripts must find no person before Phase 2 starts.

5. Language model provider

The model is fine-tuned on servers we control. If an external API is used, only sanitized text is sent, and the provider must not train on our data.

6. Accountability

The data protection lead reviews this policy every 12 months. Complaints go to privacy@example.org. A community feedback session is held every 6 months.
